

Ball Aerospace Tests Electronically-Steered Antenna with Telesat's LEO Phase 1 Satellite, Streams Video

The first low latency broadband demonstration using a fully electronically-steered flat panel antenna over Telesat's Phase 1 low earth orbit (LEO) satellite

BOULDER, Colo., Jan. 25, 2019 /PRNewswire/ -- Ball Aerospace has successfully completed the first communication demonstration between Telesat's LEO Phase 1 satellite and Ball's fully electronically-steered flat panel antenna at Telesat's Allan Park ground station in Ontario, Canada. Ball and Telesat are collaborating on the development of satellite communications (SATCOM) terminals based on Ball's advanced antenna technology.

As part of the demonstration, Ball's electronically-steered antenna tracked and communicated with the Telesat LEO Phase 1 satellite and captured real-time video data, which showcased the low latency characteristics of the Telesat LEO system. Electronically-steered flat panel antennas enable non-stationary satellite tracking and support quick and seamless switching between satellites, which is necessary for large LEO constellations. In addition, electronically-steered antennas have enhanced reliability due to no moving parts, are easy to install and may be manufactured in volume at low cost.

"For decades, Ball Aerospace has been developing and building electronically-steered flat panel antennas for military and government customers," said Rob Freedman, vice president and general manager, Tactical Solutions, Ball Aerospace. "We're thrilled to work with Telesat to demonstrate this technology for their LEO satellite constellation and other commercial applications."

Telesat's LEO Phase 1 satellite was launched in January 2018 and provides an in-orbit platform for development of Telesat's high performance global constellation of low earth orbit satellites that will offer low latency high throughput data services that are truly competitive with terrestrial networks. End-user terminals capable of tracking LEO satellites, handing off between beams and between satellites, and operating maintenance-free in remote locations will further enhance the Telesat LEO value proposition.

"By successfully tracking our LEO Phase 1 satellite through multiple passes, Ball has demonstrated that their electronically-steered antenna technology is fully compatible with our system architecture," said Michel Forest, director of Engineering, Telesat. "Ball is an industry leader in advanced antenna technology and has proven expertise in the development of user terminal solutions that will allow us to meet our objective of providing fiber-like broadband and world-wide connectivity."

Ball Aerospace has five decades of heritage delivering electronically-steered flat panel, or phased array, antenna solutions, with two decades of experience delivering planar phased array terminals. Ball is developing architectures that can scale to high-volume, low-cost production using standard commercial processes and an established supply chain. Ball's mature, low-cost antenna technology will enable lower lifecycle costs for the emerging LEO SATCOM market and other commercial applications such as aircraft in-flight connectivity and 5G data services.

Ball Aerospace pioneers discoveries that enable our customers to perform beyond expectation and protect what matters most. We create innovative space solutions, enable more accurate weather forecasts, drive insightful observations of our planet, deliver actionable data and intelligence, and ensure those who defend our freedom go forward bravely and return home safely. About Ball Corporation

Ball Corporation (NYSE: BLL) supplies innovative, sustainable packaging solutions for beverage, personal care and household products customers, as well as aerospace and other technologies and services primarily for the U.S. government. Ball Corporation and its subsidiaries employ 17,500 people worldwide and reported 2017 net sales of \$11 billion. For more information, visit www.ball.com, or connect with us on [Facebook](#) or [Twitter](#).

Forward-Looking Statements

This release contains "forward-looking" statements concerning future events and financial performance. Words such as "expects," "anticipates," "estimates," "believes," "targets," "likely," "positions" and similar expressions typically identify forward-looking statements, which are generally any statements other than statements of historical fact. Such statements are based on current expectations or views of the future and are subject to risks and uncertainties, which could cause actual results or events to differ materially from those expressed or

implied. You should therefore not place undue reliance upon any forward-looking statements and any of such statements should be read in conjunction with, and, qualified in their entirety by, the cautionary statements referenced below. The company undertakes no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. Key factors, risks and uncertainties that could cause actual outcomes and results to be different are summarized in filings with the Securities and Exchange Commission, including Exhibit 99 in our Form 10-K, which are available on our website and at www.sec.gov. Additional factors that might affect: a) our packaging segments include product demand fluctuations; availability/cost of raw materials and logistics; competitive packaging, pricing and substitution; changes in climate and weather; competitive activity; footprint adjustments and other manufacturing changes; failure to achieve synergies, productivity improvements or cost reductions; mandatory deposit or other restrictive packaging laws; customer and supplier consolidation, power and supply chain influence; changes in major customer or supplier contracts or a loss of a major customer or supplier; political instability and sanctions; currency controls; changes in foreign exchange or tax rates, including due to the effects of the 2017 U.S. Tax Cuts and Jobs Act; and tariffs or other governmental actions in any country affecting goods produced by us or in our supply chain, including imported raw materials, such as pursuant to section 232 of the U.S. Trade Expansion Act of 1962; b) our aerospace segment include funding, authorization, availability and returns of government and commercial contracts; and delays, extensions and technical uncertainties affecting segment contracts; c) the company as a whole include those listed plus: changes in senior management; regulatory action or issues including tax, environmental, health and workplace safety, including U.S. FDA and other actions or public concerns affecting products filled in our containers, or chemicals or substances used in raw materials or in the manufacturing process; technological developments and innovations; litigation; strikes; labor cost changes; rates of return on assets of the company's defined benefit retirement plans; pension changes; uncertainties surrounding geopolitical events and governmental policies both in the U.S. and in other countries, including the U.S. government elections, budget, sequestration and debt limit, including the partial government shutdown; reduced cash flow; interest rates affecting our debt; and successful or unsuccessful joint ventures, acquisitions and divestitures, including with respect to the Rexam PLC acquisition and its integration, or the associated divestiture; the effect of the acquisition or the divestiture on our business relationships, operating results and business generally.
